

# Preface

Since 1999 International Conference on Computational Heat, Mass and Momentum Transfer has established as the reference event in the community of engineers and scientists which come together to share experiences every year on the international conference.

On the 12<sup>th</sup> International Conference will meet in Rome, Italy, 3-6 September 2019 in the cradle of the history of the Roman Empire in a fantastical location where professors, researchers, scientists, students all together will be productive not only for the exchange of experiences, ideas and changes in methods and applications computational in the topics of fluid dynamics and heat and mass transfer, but also will be a good opportunity for young engineers and scientists to learn about new trends in computational methods.

Rome represents an excellent opportunity to bring together members of the international heat and mass transfer community in a unique location that offers historical and artistic attractions, a wide array of accommodation and transportation options, and meeting facilities of the highest level.

The ICCHMT 2019 had the greatest resonance in the technical and scientific communities all over the World.

We would like to thank all session chairs and the technical program committee members for their supports and dedication as always. And the gratitude also goes to all the authors who have attended the conference and contributed to the conference.
