

Opening Address

It is with great pleasure for MIT-ADT University to organize the **6th International Conference on Energy and City of the future, EVF2019**. The quest for knowledge has been from the beginning of time but knowledge only becomes valuable when it is disseminated and applied to benefit humankind. It's the first time in India that the 6th Edition of EVF Series with ECAM-EPMI was held at MIT ADT University Campus, Pune, India. The seven themes of the conference are Energy & Management, City and Building of the future, Waste Management, Factories of the Future, e-Health, Transport & Mobility, Cultural Infrastructure. We have received around 178 full-length papers across the globe. International Authors from France, Canada, Algeria, Russia, and Bulgaria have participated. National authors from Andhra Pradesh, Punjab, Uttar Pradesh, Tamil Nadu & Maharashtra from the Institute like IITs, NIT, and COEP have participants. After a stringent and double-blind review process by International and National reviewers' panel, we had selected only 125 papers for presenting the paper at the conference.

EVF2019 consists mainly of four sessions, the keynote speeches from specially invited speakers which would inspire the participants in their future work, the oral presentations from the participants, the thematic session especially for the researchers across the globe, and the panel discussion led by the Industry experts and Academic experts. With these four sessions, people will learn and get benefited from the researches of others and the free exchange of ideas is ensured.

The aftermath of this event is this volume devoted to issues discussed during the conference.
